

INTRODUCING Cel-Fi Cellmate

**ORBIT INNOVATIONS
GROUP PTY LTD**

Introducing the Cel-Fi Cellmate for the Telstra network, the portable mobile repeater in a hard case that can be carried and deployed where greater mobile signal is needed.

Your Cellmate is ideal for use by emergency services, marine applications, transported between mine sites, farm vehicles, trucks or fleet vehicles

IMPROVE YOUR MOBILE COVERAGE ON THE MOVE

Cel-Fi Cellmate is a 3G/4G mobile signal amplifier that provides up to 70 dB of signal gain - 30 X more powerful than a standard antenna/cradle setup.

Cel-Fi Cellmate will provide coverage for 20 + active users depending on the mobile network capability in your area

The 4G/LTE bands can only be utilised for data if both the smart phone and local network support Voice over LTE (VoLTE). You will need to check your smart phone to confirm it has VoLTE functionality.

* Cel-Fi Cellmate will not boost in areas where the signal is already very strong.

* Cel-Fi Cellmate will not boost in areas where there is no signal.

**AVAILABLE FOR
HIRE
OR
PURCHASE**
